

### *Pond Liners*

- 45 mil thickness at or above industry standard
- 20 year guarantee against U.V. breakdown
- puncture and tear resistant.

Generally, the cheapest, easiest and longest lasting way to create small to large backyard water gardens. Easy to transport, available in many sizes and allows creativity for the builder in terms of size of pond, depth, shape and in-pond contours. You can also add extra pieces of liner to create waterfalls and streams.

Use underlay with your liner for added protection and insurance from tree root and frost-heave rock punctures.
